04 Movable Column Design (Patent pending)

Distinctive movable column design

World first!!

Patent pending

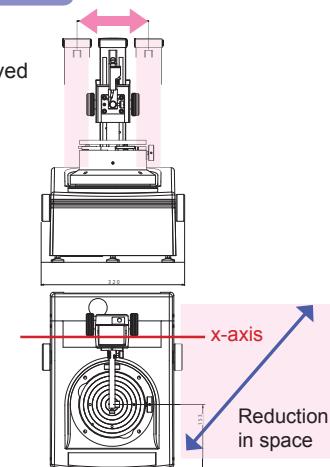

Design of existing model

Design of RONDCOM TOUCH

Z-axis column can be moved from side to side

The placement of X-axis behind the main base-contributes to its compact design.

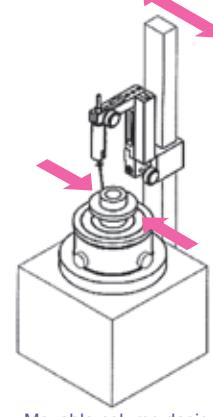

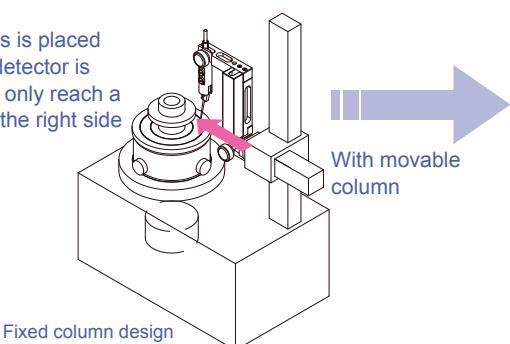

05 Advantages of the Movable Column Design

The movable column allows a detector to reach a workpiece from both right and left sides.

Patent pending

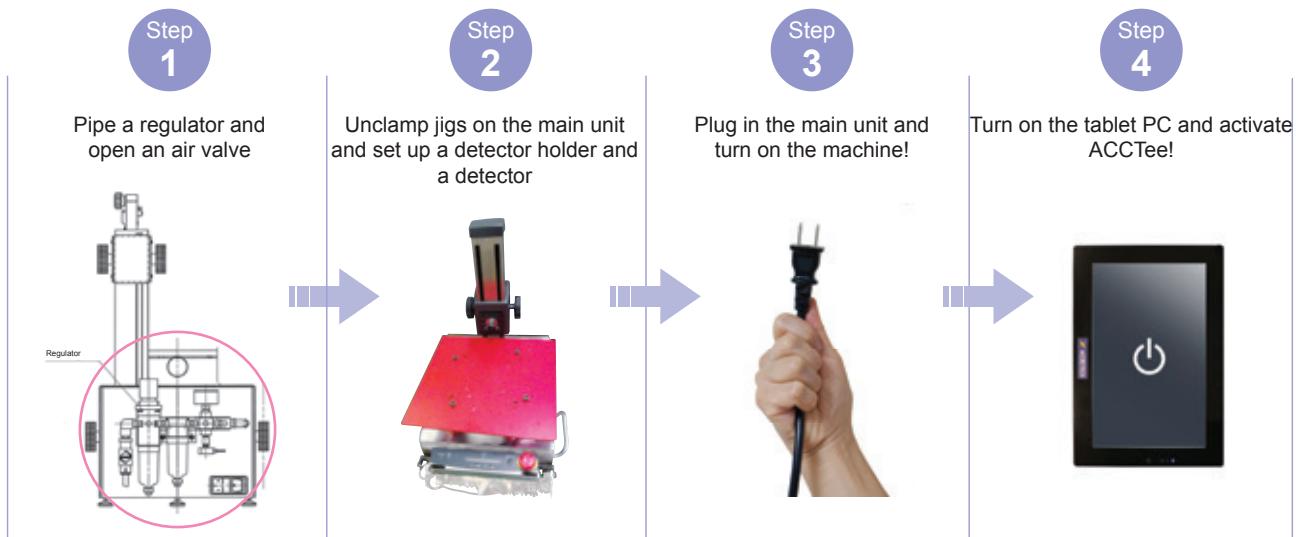

When the Z-axis is placed on the right, a detector is limited and can only reach a workpiece from the right side

A detector can flexibly reach a workpiece!

11 Error Judgment (Standard)

If a problem occurs, this function identifies an error and shows a countermeasure to solve it.

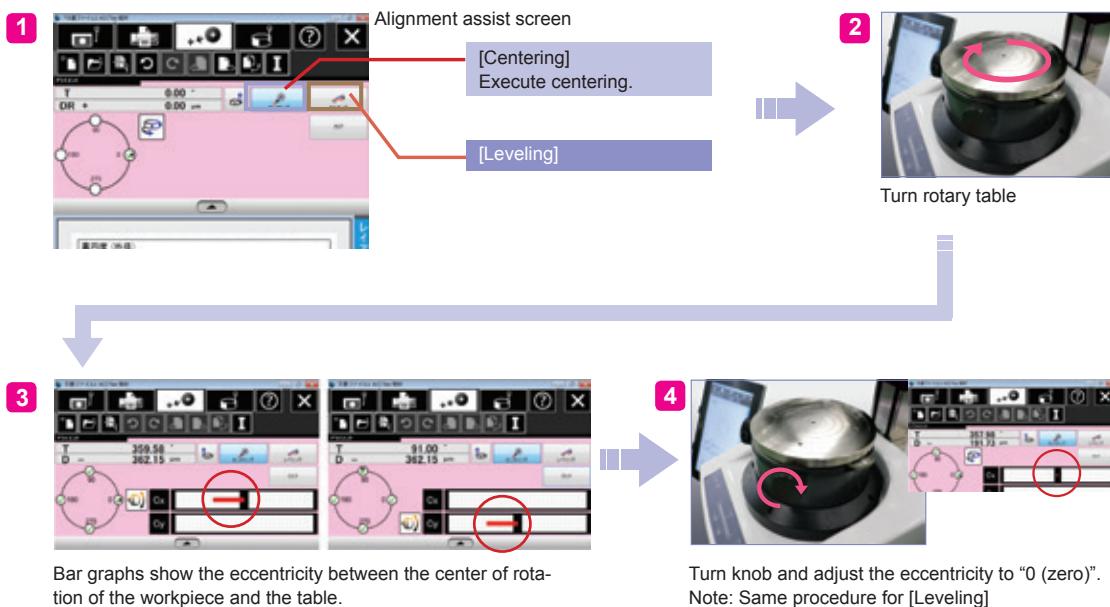

An error message shown with judgment informs an operator of an error status immediately.

- Error examples:
- Lower air pressure
 - Detector touches a workpiece too much
 - Motor overcurrent
 - Communication cut-off
 - Time-out

12 Alignment Assist Function (Standard)

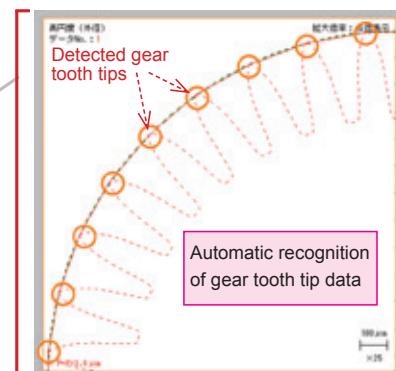

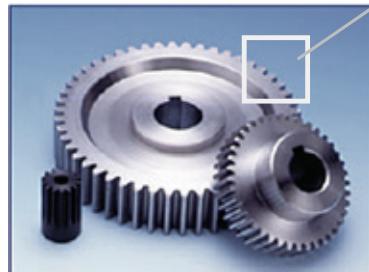

13 Gear Analysis Function (Standard)

This function automatically recognizes gear tooth tips and allows roundness analysis using only tip surface data. (Roundness AI function)

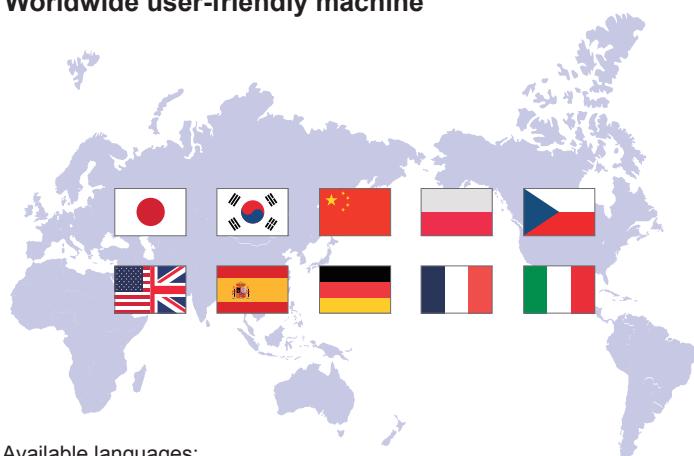

Point
Operators do not need to set a number of notch segments.
